The matter was earlier discussed in 144th meeting of EC held on 29th April, 2025 and the EC after deliberation found that the unit is neither involved in recycling nor was able to justify the reason for not trying to use local recycling facilities that are available in the country. The EC also noted that some of the e-waste processors have indicated that adequate quantity of high quality PCBs is not available to them and therefore they have a challenge of capacity utilisation and viability. The EC felt that this had merit and need to be addressed, and at least some high grade PCBs should be supplied in the domestic market. Therefore, EC did not consider the application and asked applicant to first recycle some PCB themselves and also explore possibility to supplied to domestic recycler. Further, if there is any scope to export low grade PCB, may apply afresh.

Now, the applicant has mentioned that currently, due to a lack of technology, knowledge, and infrastructure, these hazardous goods are landfilled, burned, or placed in acid baths to extract gold and silver. The big e-waste recyclers in India want to buy the high grade PCBs where the recovery is easy and high. The low grade PCB which needs more sophisticated and advanced technologies is recycled informally in a traditional acid bath way which is harmful for the environment. Europe and Japan have more developed E-Waste recycling. They have advanced technology and can recycle E-Waste in a more profitable and environmentally friendly way including the low grade materials.
