1.7. M/s Chloride Metals Limited, Ahmednagar, Maharashtra (New Application).

The application pertains to import of 50,000 MT Lead Scrap/ Battery Scrap (as per ISRI Code: Rains/ Rails/ Rink/ Radio/ Racks/ Relay/ Ropes/ Rents/ Rakes) (A1160/B1020). The applicant has furnished Form 5, Justification for import, Process flow chart indicating adequate pollution control equipment, Lead analysis report in soil, air, water, stack and blood of the workers. The Consent No Format1.0/CAC/UAN/No. MPCB- Consent-0000217458/CO/2502002275 dated 26th February, 2025 is valid up to 31st March, 2026. The Authorization No. BO/2311000008 dated 20th November 2023 is valid up to 31st October, 2028. The consented capacity for Recycling of Lead Acid Batteries and converted into Lead Alloys & Cast components is 1,32,000 MT/A. The date of establishment is 24th March, 2022. The Actual date of operation is 11th August, 2023. The production in last FY (2024-2025) is 96,744 MT and the Export is 40 MT. The unit has 450 Nos. of employees.

The matter was first discussed in 144th EC, Based on the information and details submitted by the applicant, the EC after deliberation on the proposal recommended import of 64,496 MT of Lead Scrap/ Battery Scrap (as per ISRI Code: Rains/ Rails/ Rink/ Radio/ Racks/ Relay/ Ropes/ Rents/ Rakes) (B1020), Rink and Rains with not more than 2% of liquid/electrolyte by weight in a given lot/consignment/container) (A1160). Further, the above quantity may be granted after submission of site visit report by CPCB stating compliance of SOP without referring the application to the EC. Further, the quantity of import of RINK will be limited to 50% of the total import quantity recommended. The import of RINK & RAINS (A1160) is allowed subject to the Prior Informed Consent (PIC) of the exporting country.

CPCB site visit report has been received in the Ministry. As per the CPCB inspection, report unit is complying with SOP. However, from the CPCB site visit report, it has been observed that the CA Certificate attached with the inspection report and provided by the applicant while making application has discrepancies. The CA Certificate attached with CPCB inspection report indicates that 38,613.271 MT of indigenous raw material was procured and the manufactured quantity was 21,885.757 MT in FY 2024 - 25. However, CA certificate provided with application indicates 96,744 MT production and 40 MT export in FY 2024-25 and on that basis eligible import quantity was calculated and recommended by EC in its 144th meeting.

Therefore, the matter was placed before EC for deliberation/discussion in its 153rd meeting held on 30th January, 2026. in presence of applicant and EC recommended that details of domestic procurement of raw material with proper bifurcation i.e. battery scrap, lead scrap and Remelted lead (RML) purchased along with details of the company from where the same was purchased may be obtained from the applicant. In case such sellers have already received import permission on account of the remelted lead produced by them, the eligible quantity may be correspondingly reduced. Permission may be given only after satisfactory reply for the eligible quantity so determined, without referring to the EC.

Thereafter, the applicant has provided the requisite the details. However, during

processing of the case, it is noted that there is a variation in the import quantity requested by the applicant in Form-5 on NSWS Portal (50,000 MT) and the quantity recommended by the EC (64,496 MT) based on the existing calculation criteria, therefore, case is again placed before the EC for reconsideration.

The matter was considered in 152nd Expert committee meeting held on 22nd and 23rd December 2025, Based on the information/details submitted by the applicant, the EC after deliberation on the proposal, recommended clarification from the applicant regarding the procurement of raw material and low value addition in case of GST. Till than the matter is deferred.

Subsequently, the applicant has submitted the requisite clarification stating that the raw materials were procured during a period of inadequate availability and exceptionally high market demand, which resulted in significantly increased procurement costs. It has been submitted that after processing the raw materials into finished products and by-products, prevailing market conditions and competitive pressures compelled the unit to sell the products at comparatively lower prices, at times even below procurement cost. As a result, the value addition reflected in GST appeared low. The applicant has requested that these market conditions, from procurement to sale, may be considered while evaluating the application.

In view, the matter is placed before the EC for consideration and further deliberation.

The matter was discussed in 150th EC held on 14th October, 2025, based on the information/details submitted by the applicant, the EC after deliberation on the proposal, recommended import of 4,697 MT of old/used rubber tyre scrap/tube scrap (B3080/B3040/B3140). EC found that the difference between the Gross GST amount & Input tax credit (ITC) is hardly around 10% i.e. the value addition is very low, so EC asked the application to clarify the reason for very low value addition. Permission may be given only after satisfactory reply, without referring to EC again.

Subsequently, the applicant has submitted the requisite clarification stating that value addition in processing of waste tyres is generally low, as the activity mainly involves collection and mechanical processing such as cutting, shredding or breaking into intermediate products. The finished products, including reclaimed rubber, rubber crumbs, tyre chips and scrap steel, have comparatively low market value. It has been submitted that a substantial portion of turnover is incurred towards procurement of waste tyres, transportation, electricity, fuel and machinery, on which GST is paid, resulting in significant Input Tax Credit (ITC). Since the process does not involve substantial transformation or enhancement, the value addition remains minimal. The applicant has further stated that due to competitive market conditions, products are sometimes sold at very low prices, leading to adjustment of outward GST liability against available ITC and consequently low net GST payable.

In view, the matter is placed before the EC for consideration and further deliberation.

The matter was discussed in 150th EC held on Based on the information/details submitted by the applicant, the EC after deliberation on the proposal, recommended import of 15,646 MT of old/used rubber tyre scrap/tube scrap (B3080/B3140/B3040). Further, 50% of the aforesaid recommended quantity (i.e. 7,823 MT) may be granted now and the rest quantity (i.e. 7,823 MT) may be granted after submission of site visit report by CPCB stating compliance of SOP without referring the application to EC again. EC found that the difference between the Gross GST amount & Input tax credit (ITC) is hardly around 10% i.e. the value addition is very low, so EC asked the application to clarify the reason for very low value addition. Permission may be given only after satisfactory reply, without referring to EC again.

Subsequently, the applicant has submitted clarification stating that value addition in waste tyre processing is inherently low, as the activity mainly involves collection and mechanical processing such as cutting, shredding or breaking tyres into simpler products. The finished products, including rubber crumbs, tyre chips and scrap steel, have limited market value and are sold at competitive rates. It has been submitted that a major portion of turnover is incurred towards procurement of waste tyres, transportation, electricity, fuel and other operational costs, on which GST is paid, resulting in substantial ITC. Since the process does not significantly enhance the intrinsic value of the material and margins in this B2B, price-sensitive sector are generally low, most of the outward GST liability is adjusted against ITC,

leading to low net GST payable.

In view, the matter is placed before the EC for consideration and further deliberation.
