The matter was last discussed in the 80<sup>th</sup> meeting of Expert Committee held on 13<sup>th</sup> and 14<sup>th</sup> July, 2017 and the Committee recommended the following:

“During presentation, the applicant provided information about the process with which the waste proposed to be imported is generated and the process to be employed for producing manganese sulphate from the waste. The waste is generated during the recovery of zinc from ZnSO<sub>4</sub> solution obtained in the zinc producing plant from zinc concentrate. As per the analysis report from Belgium, the waste contains 50 percent manganese and about 7 percent lead and 500 ppm silver. The lead containing waste generated in the process will be sent to TSDF and the product will be manganese sulphate. The applicant has necessary authorization from the State Board but need to be inspected by CPCB. The Ministry therefore recommended site visit by CPCB”.
